3.Alavi Hospitals – Healthcare Website with Dynamic Blog

Tech Stack: Core PHP, MySQL, HTML/CSS, JavaScript, Bootstrap

Description:

- Alavi Hospitals is a healthcare website that showcases hospital services, facilities, departments, and health-related updates. The platform includes a dynamic blog section to share medical articles, updates, and wellness tips.

Key Contributions:

- Developed and integrated a dynamic blog module using Core PHP and MySQL, allowing admin users to add, edit, and delete health-related articles. Created custom admin panel for blog and content management with image upload and WYSIWYG editor support. Designed responsive UI for blog listings and detail pages using Bootstrap and custom CSS. Implemented category-based filtering and SEO-friendly URLs for better search engine visibility. Worked on overall site maintenance, performance improvements, and mobile optimization.

Project: EsteticaNow – Spa & Salon Appointment Booking Platform

Tech Stack: PHP (Yii2 Framework), MySQL, JavaScript, HTML, CSS, Bootstrap

Role: **Junior PHP Developer**

Description:

Developedand enhanced a comprehensive spa and salon appointment booking

platform with distinct vendor modules for managing services, staff, and bookings. The platform consists of a web application (esteticanow.com) and a vendor portal (app.esteticanow.com), designed to streamline operations for salon and spa businesses.

Key Contributions:

- Developed and maintained backend modules using the Yii2 Framework for efficient service and booking management. Implemented vendor-specific dashboards enabling salons to manage appointments, staff schedules, and customer interactions. Integrated user authentication, role-based access control, and dynamic service listings.
- experience for both customers and vendors. Built API endpoints to support seamless communication between web and mobile platforms. Optimized database queries and implemented caching for improved system performance. Collaborated with cross-functional teams to deploy and maintain production environments.

4.Project: Customer Support Management System

Tech Stack: PHP (Yii2 Framework), MySQL, JavaScript, HTML, CSS, Bootstrap, AngularJs, ReactJs

Key Contributions:

- Designed and developed a Customer Support Management System using Angular for the frontend and RESTful APIs for the backend to streamline customer issue management.
- The system enables efficient ticket creation, assignment, tracking, and resolution with role-based dashboards for Admins, Support Agents, and Customers.
- Focused on performance, security, and user experience to ensure smooth operations and faster issue resolution.
- Developed a scalable Customer Support Management System using Angular and REST APIs.
- Implemented ticket lifecycle management (Create, Assign, In-Progress, Resolved, Closed).
- Designed role-based access control for Admin, Support Agent, and Customer users
- Built dynamic Angular components for ticket listing, filtering, and status updates.
- Integrated secure authentication and authorization mechanisms.
- Optimized API calls to improve system performance and reduce response time.
- Implemented search, filter, and priority-based ticket management features.
- Ensured responsive UI using Bootstrap and Angular Material.
- Collaborated with backend teams to design efficient API contracts.
- Performed debugging, testing, and performance optimization.
