Ahamad Hussain

+91-8142014720 hussain.reja70@gmail.com Hyderabad

Professional Summary

- Results-driven **Data Engineer** with **6 months of overall experience**, including hands-on project work and real-world application of data engineering.
- Data Engineer with knowledge in building scalable and reliable data solutions using **Microsoft Azure.**
- Proficient in key Azure services including **Azure Data Factory, Azure SQL Database, Azure Synapse Analytics, Azure Databricks**.
- Knowledge in **Data visualization** using **Power BI**,**Exce**l including development of interactive dashboards and insightful business reports.
- Comfortable working with **Google Sheets** for ad-hoc **data analysis**, reporting, and lightweight collaboration in analytics workflows.
- Strong in developing end-to-end **ETL/ELT pipelines** using tools like **Azure Data Factory** and **PySpark**.
- Experienced in writing complex **SQL** queries, managing data transformations, and ensuring data quality and integrity.
- Skilled in **Python, SQL** and **PySpark** for data processing, automation, and building data pipelines.
- Knowledgeable in data warehousing concepts and designing analytics-ready data structures.
- Comfortable working in Agile teams and collaborating with cross-functional stakeholders to deliver business insights.
- Committed to continuous learning with ongoing training in Azure Data factory, cloud-native architecture, and advanced data engineering practices.
- Seeking to contribute to data-driven decision-making and digital transformation in a forward-thinking organization.

Training Details

- **Azure Data Engineer Course –** LevelUp Institute, Ameerpet, Hyderabad
  Gained hands-on experience in Azure-based data services including Azure Data Factory, Azure SQL Database, Azure Synapse Analytics, and Azure Databricks. Focused on building scalable data pipelines, ETL processes, and cloud-based data warehousing solutions.
- **Project-Based Industrial Training** – Indian Railways, Rail Spring Karkhana, Sithouli, Gwalior (MP) Duration: 6 months

Worked on practical aspects of industrial operations, exposure to real-world engineering projects, and data recording processes in a large-scale manufacturing environment.

Technical Skills

Developer Tools	Eclipse, MS Office, Git, Jira, Power BI, Excel,Google Sheets
Cloud Platform	Azure Functions, Azure Data Lake, Azure Data Factory, Azure Brics, ETL/ELT
Database Tools	SQL Developer, MySql
Languages	Python, SQL, PySpark
Data Base	SQL ,SQL Server

Project Details

- **Analyzing Sales:** Project focuses on building a robust data pipeline to analyze AdventureWorks sales data using Azure's cloud ecosystem. The pipeline ingests raw data from an on-premises SQL Server into Azure Data Lake Storage, processes it using Azure Databricks (Apache Spark), and loads it into Azure Synapse Analytics for advanced reporting. Power BI is used for visualization, providing actionable insights into sales performance

  Technologies Used: SQL Server, Azure Data Factory, Azure Data Lake Gen2, Azure Synapse Analytics, Azure Active Directory and Azure Key Vault

Academic Background

Master's-MA (DAVV University) 2025

Awards & Achievements

- Participated in inter college debate competition
- Volunteered & hosted cultural fests in college.
