Dinabandhu Behera

Application Support Engineer | Linux, Oracle, SQL, Incident Management, ITIL

Email: dinabandhubehera.info@gmail.com

Mobile: +91 8018228741

Objective:

As a professional I believe in intellectually stimulating work process, to excel and succeed through smart work, thus enhancing value addition to my job, the organization and myself. Have the ability to work independently as well as good team contributor on group projects.

Summary of Experience:

- Working as a **Software Engineer** with **BNP Paribas**, Bangalore from **May 2024 to till date.**
- **Having around 1 years' Experience in Application & Production Support & Maintenance using Oracle, UNIX & Shell Scripting.**

Technical Summary:

- Seasoned IT professional with **1**years of experience as an Application/Production Support Engineer, adept in ensuring optimal system functionality and resolving technical issues efficiently.
- Proven expertise in operational 24x7 support, implementing best-practice **troubleshooting, monitoring, planning,** and maintenance for seamless system operations.
- Good knowledge of **ITIL Process (Incident Management /Problem Management/Change Management)**.
- Possesses extensive expertise in **Production Environment management** and **Batch Monitoring.**
- Operational experience in a **client-server environment**, proficiently utilizing **client-server applications**.
- Good analytical and problem-solving abilities and provide resolution on support issues within the scope of support per the Service Level Agreement (**SLA)**
- Strong technical expertise in databases **Oracle (19c/21c)** on UNIX environments. Also working knowledge in taking advantage of Unix **Shell scripts.**
- Hands-on experience with file manipulation commands like **CAT, VI, TAR, CP, MV, RM,** etc.
- File and Directory operations with **Copy**, **Move**, **Remove,** and **Rename** operations.
- Hands-on experience with a filtering command like **GREP, SED, FIND, CUT, SORT, UNIQ,** and **AWK.**
- Hands-on experience with networking commands such as **Ping, NETSTAT, Telnet, and SSH.**
- Proficient in job scheduling utilities, including expertise in **CRONTAB.**
- Writing & Enhancing **UNIX shell scripts** as per the business requirement.
- Extensive experience with **Joins**, **sub-queries**, **Constraints**, **Pseudo columns, and Set operators.**
- Demonstrates strong proficiency in **Views, Materialized Views, and Index management.**

- Possesses foundational knowledge of **PL/SQL**, including **Cursors, Procedures, Functions, and Triggers.**
- As a team member Support engineer working on all **incident tickets** and following up with other team members for change and release activity.

Professional Skills:

Language	**:**	SQL, PL/SQL
Data base	**:**	Oracle 19c/21c
Operating System	**:**	Windows, UNIX, LINUX
Ticketing Tools	**:**	Service Now**,** Jira,
Monitoring Tools	**:**	Control-M, Crontab
Connectivity Tools	**:**	Putty, Citrix, WinSCP

Educational Qualification:

- Completed Bachelor's Degree from F.M University, Odisha in 2024.

Project Details:

Project Name	**: Transaction Processing System**
Client	**: Citi Bank**
Role	**: Oracle L1 Production Support Engineer**
Software	**: Oracle (19c/21c) SQL, Unix**
Team Size	**:10**
Duration	**: From May 2024- To - Till**

Description:

Provided L1 production for the Citi Bank's Transaction Processing System, ensuring real-time transaction processing, database health monitoring, and incident resolution. The project focused on ensuring the accuracy, efficiency, and reliability of banking operations, including customer transactions, Fund transfers, data validation and reporting.

Responsibilities:

- Provided first-line support for Oracle databases, ensuring transaction processing systems function smoothly without failures.
- Ran SQL queries to fetch transaction records, validate date, troubleshoot issues, and support application teams in resolving errors.
- Ensured accurate fund transfer, account updates, and transaction records by validating SQL queries and checking database logs.
- Assisted in maintaining NEFT, RTGS, IMPS, UPI, and other banking transactions, ensuring seamless fund transfers.
- Monitored, analysed, and resolved low-to-medium severity issued related to database transactions and application failures.
- Investigated failed transactions, reconciliation mismatches, and data inconsistencies, providing quick resolutions.
- Assisted in root cause analysis for recurring issues, documenting findings and preventive measures.
- Escalated high-security incidents to L2/L3 teams with detailed logs and analysis.
- Conducted regular tablespace checks, instance monitoring, and log analysis to identify performances bottlenecks.
- Assisted in turning slow-running queries and improving response times for business-critical transactions.
- Managed and monitored daily and monthly batch jobs for transaction processing, ensuring successful execution and timely completion.
- Supported database recovery procedures in case of failures to ensure data integrity and minimal downtime.
- Worked closely with application support, database administrators (DBAs), and development teams to resolve critical issues.
- Provided regular updates on incidents, database performance, and issue resolutions to stakeholders.
- Maintained incident logs, standard operating procedures (SOPs), and technical documentation to improve response time for future incidents.
- Assisted in user access provisioning, privilege checks, and security audits for banking databases.
- Ensured transaction logs, error reports, and reconciliation reports net banking compliance and audit requirements.

Declaration:

I hereby declare that above statements are true to the best of my knowledge and belief.
